Release Plan

Product name : AMAZINO
Team name : Brokers
Release name : AMAZINO-alpha
Revision number 0 from 2019-06-27

High level goals
1. User should be able to log in and access their account details
2. Sellers should be able to post listings to the market
3. Buyers should be able to view and pay for items in the market
4. The web app should be functional and simple to use

User stories for release

Sprint 1
- (13) As a developer, I need a database for viewing the whole log of user actions and managing the website traffic.
- (8) As a seller, I need to register my stuff with some information such as price/simple description. (highest priority)
- (8) As a user, I need to login/logout to track my purchases and listings.
- (3) As a dev, I need a local account balance to use and test payment features.

Sprint 2
- (5) As a buyer, I need to be able to bet for the product with my own point.
- (3) As a buyer, I need to charge points / be able to pay money for stuff.
- (8) As a dev, I need to have a fair drawing algorithm for deciding the winner.
- (8) As a buyer, I need a visible market with listings available for me to choose from.

Sprint 3
- (8) As a buyer, I need to search for the products I want.
- (2) As a website manager, I need a pay limit to prevent the loss of customers.
- (13) As a user, I need a well designed and intuitive user interface.

Product backlog
- (20) As a buyer, I need product recommendations for me.

- (8) As a seller, I need a way to advertise or share my listings.
